DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claims 1 and 6 lines 1 and 2 the invention is set forth as a "tube and extrusion press". Is it a --tube extrusion press-- or is Applicant trying to claim a main or press cylinder of an extruder for extruding tubes and extrusions?

Claim 5 recites the limitation "the cylinder chamber (28)" in line 3. There is insufficient antecedent basis for this limitation in the claim.

In claim 6, line 4 the term "especially" is unnecessary.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by FR 2154971. FR 2154971 discloses a press cylinder (6) of an extrusion press having a

press piston (61) connected with a cantilevered rod (71) projecting out the press cylinder housing during extrusion. The rod has a forward advance and retraction cylinder (7) movable within a pressurizable space in a hollow bore of the rod (71). The cylinder (7) has a telescope tube (72) having an annular gap (722) in flow communication with the hollow bore of rod (71). The telescope tube (72) is surrounded by a housing shell (73) and is held stationary at a connecting block (fig. 1, at item 722). Annular gap (722) and annular gap (721) provide flow connections. At (item 7 in fig. 1) a packing seals the pressurizable space and the telescope tube slides therein. The press piston (61) that slides within the main cylinder housing (6) has a guide cut into the cylinder housing defined by connection (622) and the piston (61) is a guide for the rod (71).

Allowable Subject Matter

Claims 3,4 and 6-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art of record does not disclose a thickened end and radial collar as claimed in claim 3 including the limitations of claim 1.

The prior art of record does not disclose a compensating vessel and slider as claimed in claim 6 including the limitations of claim 1.
